Evidence Checklist — Lab 08

■ I used only supplied synthetic data and lab-only folder access.

■ I recorded the approved source files and unresolved assumptions.

■ I verified the produced artifact against the campaign objective and constraints.

■ I exercised the controlled failure without a live send or destructive action.

■ I ran `python3 scripts/verify_lab.py` and captured the PASS output.

■ I made a PASS, REPAIR or STOP decision and named the human owner.

■ I completed the cleanup and revoked temporary access.

Acceptance rule: Exactly one dry-run schedule is recorded for the approved payload; rejection, expiry and retry cases stop safely.
